

Hi, I'm Emanuele

I'm based in Padova, Italy and I specialize in Industrial design and innovation. I can develop products with state of the art design tools autonomously and on time.

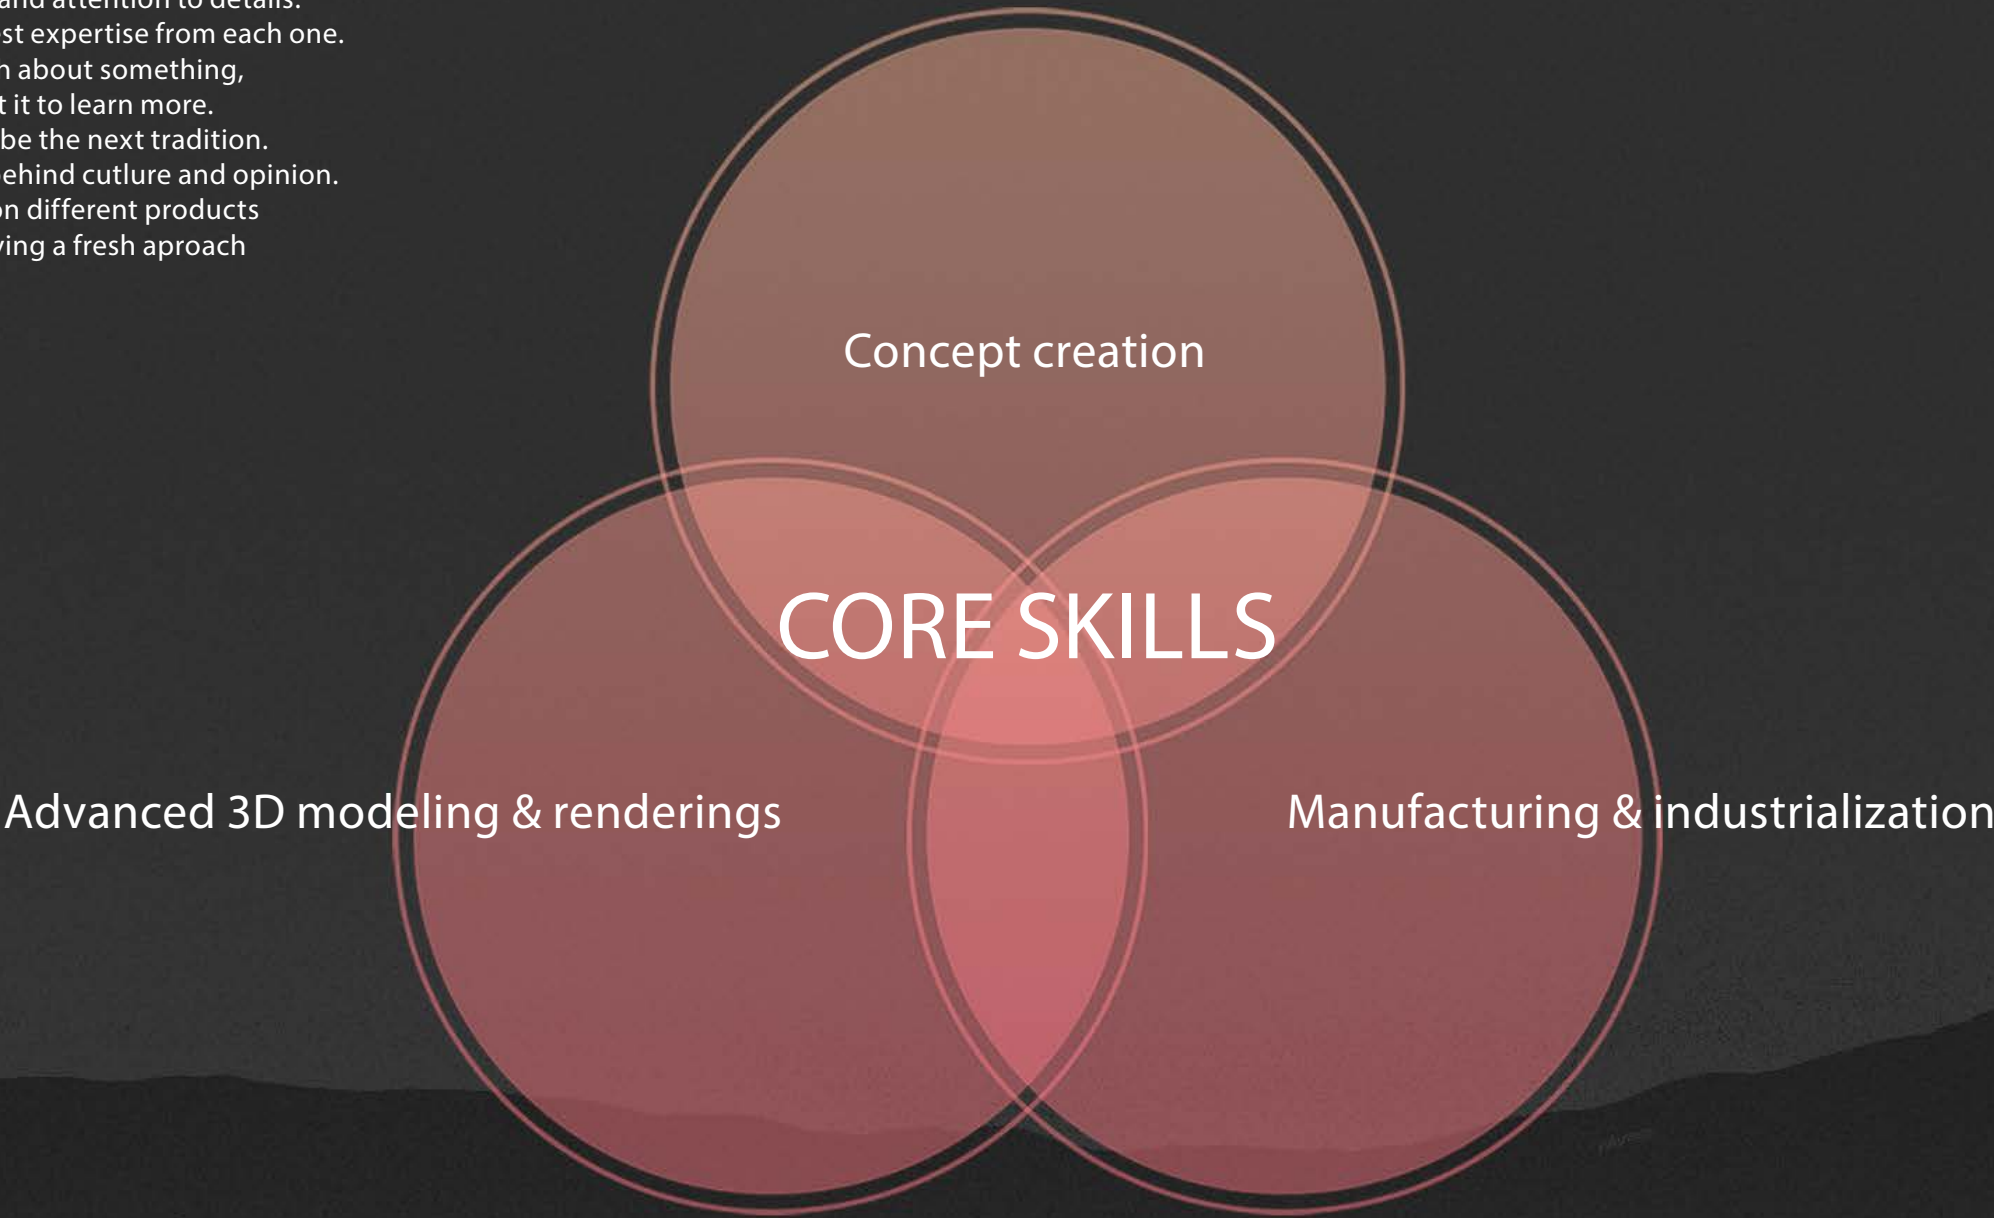

BUILDING PHYSICAL PRODUCT AND
EXPERIENCES, THAT PEOPLE LOVE

CONFIDENT
CREATIVE
BOLD
UNIQUE
SIMPLICITY
TIMELESS
HIGH-END

I help leading companies, startups and
design studios to deliver to market
innovative, best selling products

I design to achieve timeless beauty.
I believe in simplicity and attention to details.
I trust on using the best expertise from each one.
If I don't know enough about something,
I get passionate about it to learn more.
I trust innovation will be the next tradition.
I trust true beauty is behind cutlure and opinion.
I have a background on different products
because helps me having a fresh aproach

CONCEPT DESIGN

Hand sketches
Adobe Illustrator
Photoshop
Indesign
Artificial intelligence
Quick 3D modeling

ADVANCED 3D MODELING

Grasshopper
Rhino 3D
Sub D
Blender
Fusion 360
Creo

VISUALIZATION

Photoshop Renders
Keyshot
Animations
Unreal engine
VR and AR

PROTOTYPING

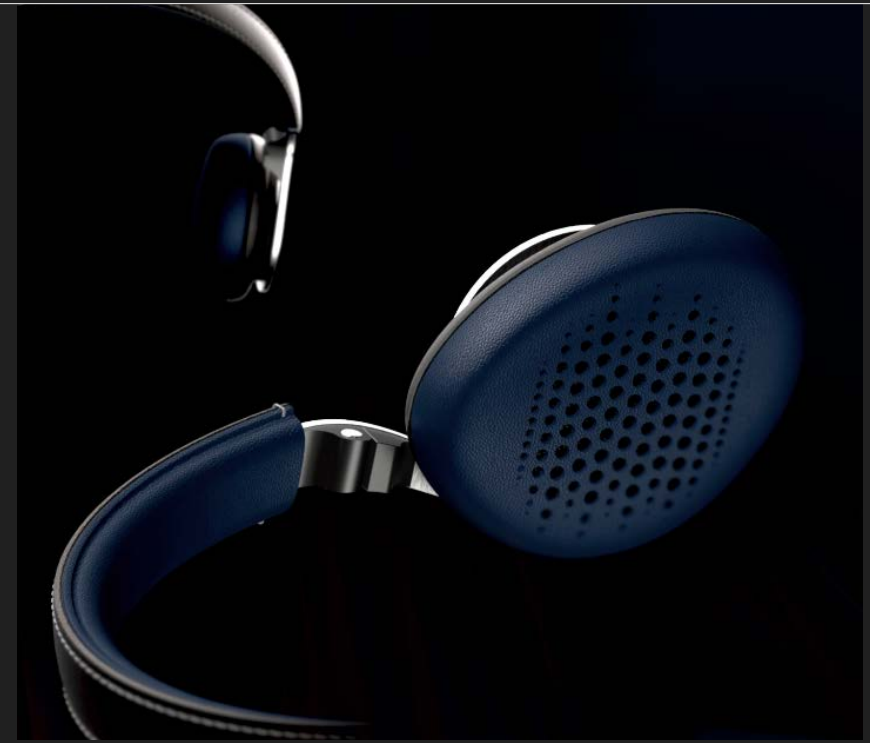

Design for 3D printing
Watertight models
FDM
MJF
Cura

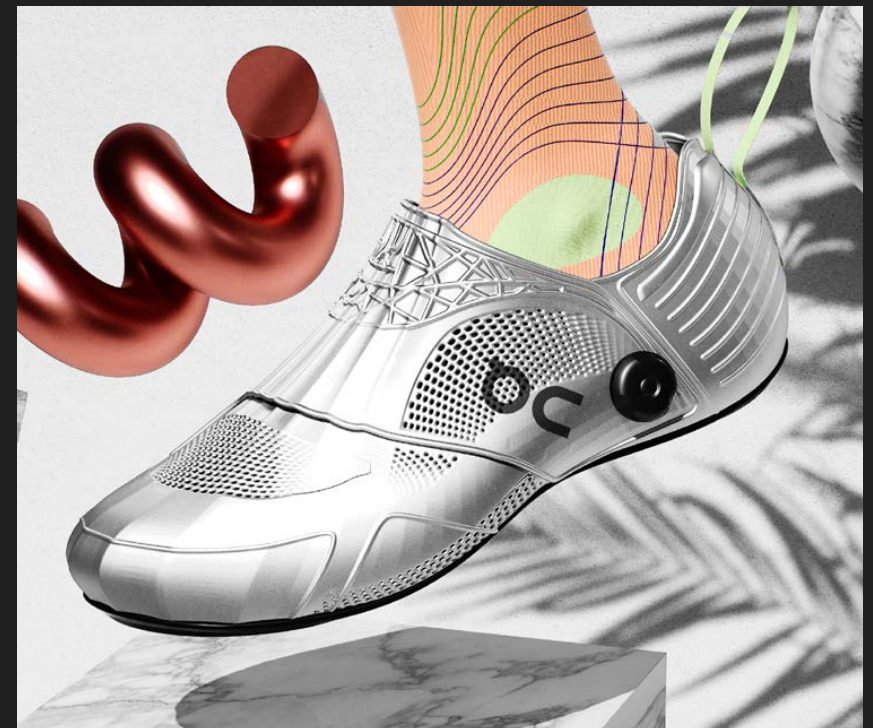

Design Engineering

WORKS

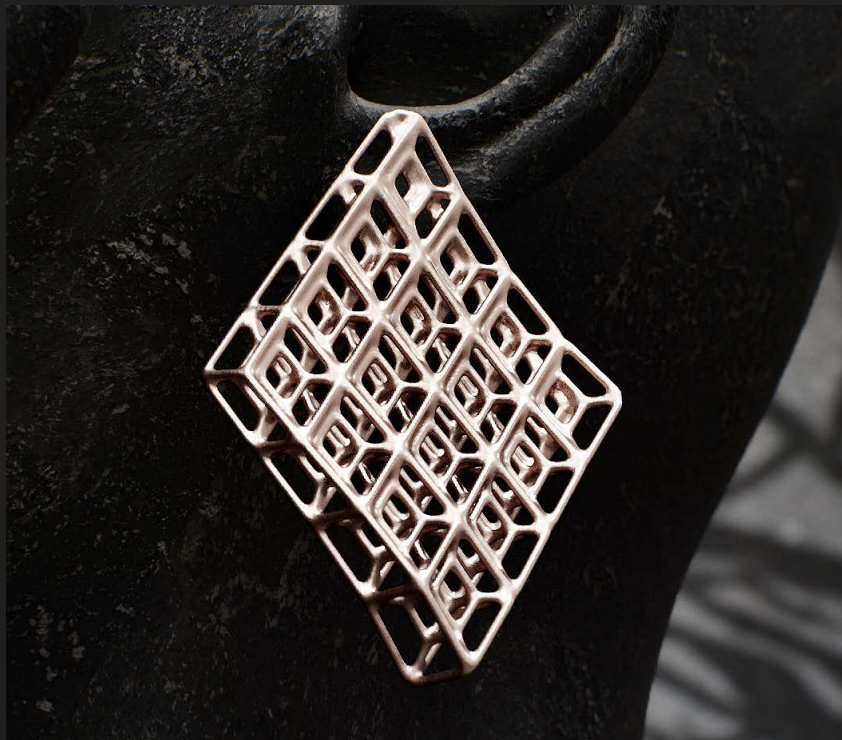

Art Direction
Industrial Design
Advanced 3D modeling
Computational Modeling
Photorealistic Renderings
3D Prototyping
Engineering

LUXURY

High end wathces
Contemporary jewellery
Smartwatch accessories
Artistic Furniture
Eyeware
Accessories

ELECTRONICS

Smartwatches
EV chargers
Speakers
Headphones
Smartwatches

SPORTING GOODS

Footwear
Goggles
Bags
Technica accessories
Eyeware

FUNRITURE & ARTS

Sofas
Charis
Office
Tables
Lamps

After extensive research and analysis to understand user needs and market trends. I utilize advanced prototyping technologies and software to create and refine product concepts, focusing on both aesthetics and functionality. Finally, collaborative teams of designers, engineers, and manufacturers work together to bring these concepts to life, ensuring seamless integration of design, technology, and production processes.

THE PROCESS

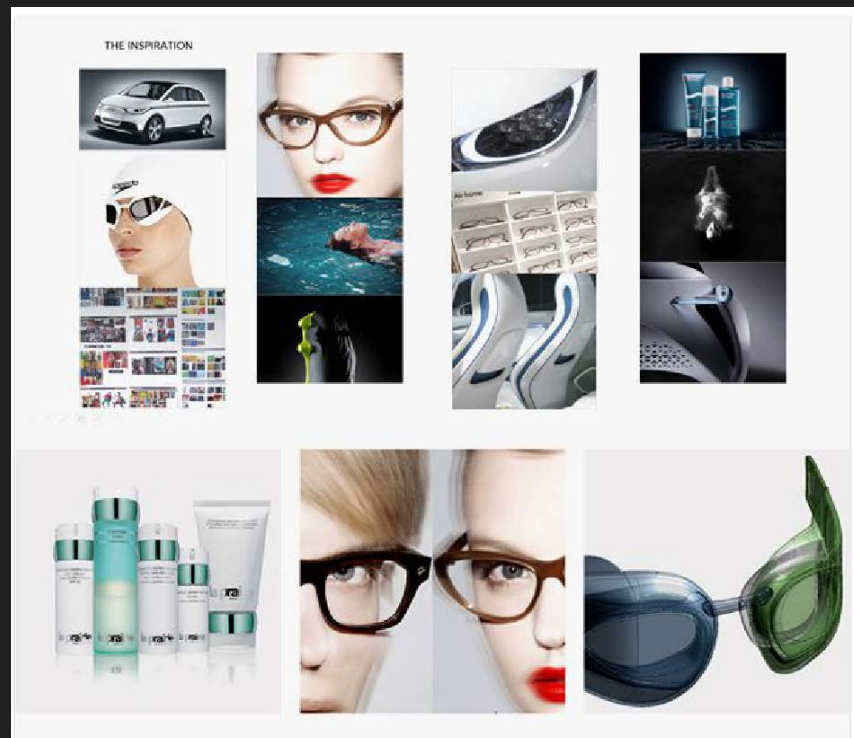

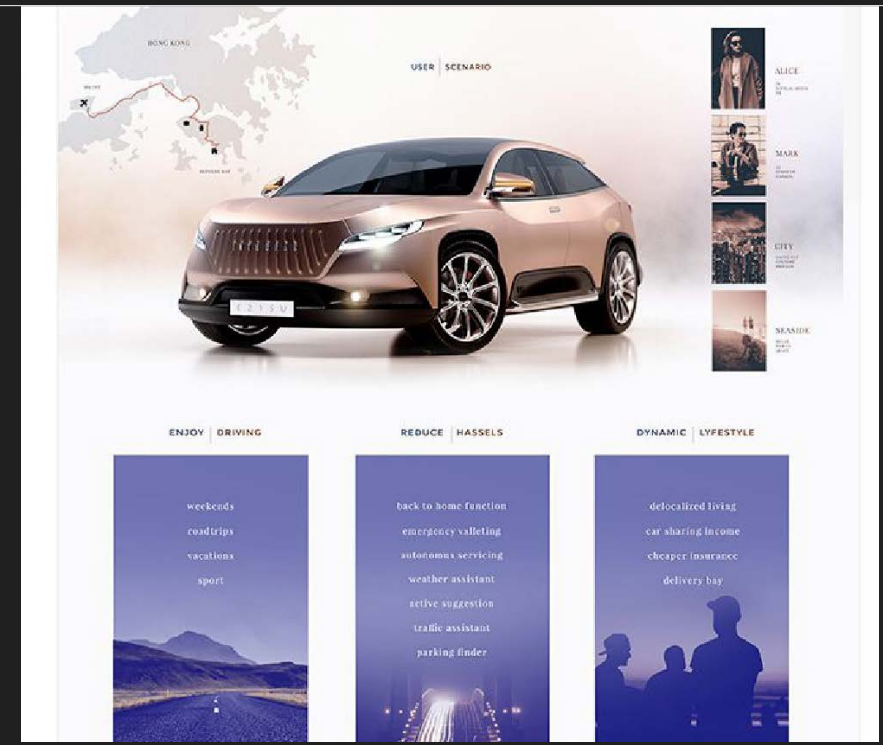

FUNCTION BEAUTIFULLY ARRANGED

- Markets are saturated of products : consumer are disoriented
I design beautiful and undestandable product proposition.

JLC - Kering

Hand & digital Sketches

I use sketching as a powerful tool to explore various design possibilities. Through sketches, I can quickly capture ideas, iterate on them, and refine concepts before moving forward with more detailed prototyping.

Sketching allows industrial designers to convey their creative vision, providing a tangible representation of their ideas for stakeholders and clients. By sketching, I can effectively communicate the aesthetics, form, and functionality of a product, giving others a clear understanding of the design direction. By sketching out different iterations, they can easily compare and evaluate design variations, making informed decisions about which direction to pursue.

Marcantonio
Formitalia - Kering
Adidas - Speedo

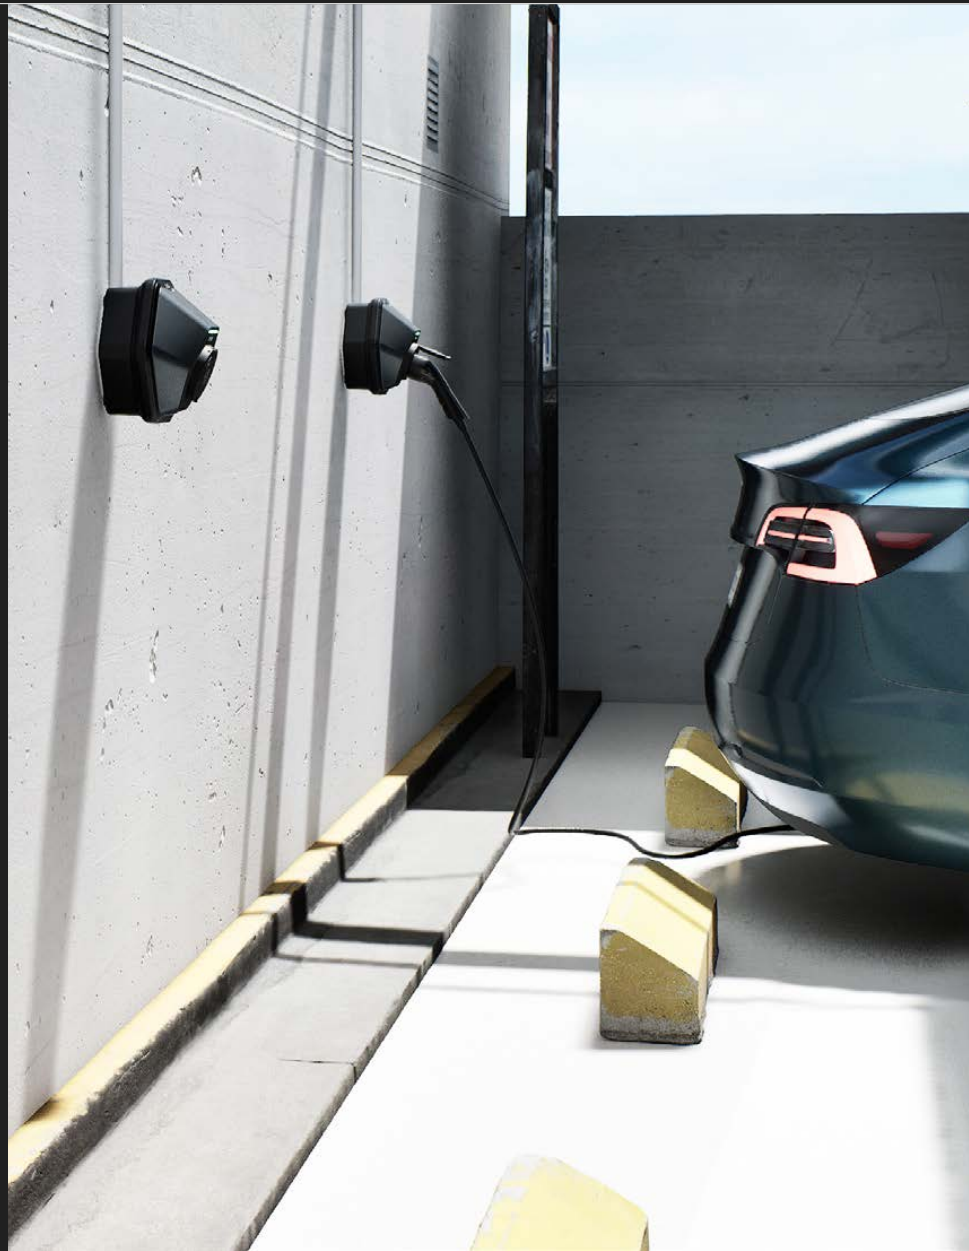

Advanced 3D CAD

3D MODELING:

As an industrial designer, I possess a unique set of skills that allow me to engineer concepts using 3D modeling, create artistic subjects using Blender, and utilize smooth Sub-D surfacing techniques.

Additionally, I have the ability to create curvature continuous shapes and employ computational design during the design process. These skills are essential in my role as an industrial designer as they enable me to bring innovative and visually appealing products to life, but also practical to produce and well thought in every aspect, maintaining my original design intent.

Client
Silla Industries
Speedo - Vertu - JLC -
Dunhill - Maison 203

State of the Art Renderings

The ability to generate photorealistic renders is crucial during the concept creation phase. By visualizing designs in a realistic context, I can evaluate their aesthetics, proportions, and overall appeal.

Photorealistic renders helps to identify any design flaws or areas for improvement before moving forward with the development process. These renders also allow me to effectively communicate my design ideas to clients and stakeholders, enabling them to visualize the final product and provide valuable feedback.

I have recently started using Unreal Engine 5 for rendering, which has revolutionized the way I approach visualizations.

EXPERIENCE
Vertu

3D prints & Prototypes

As an industrial designer, I possess the ability to engineer 3D models specifically tailored for additive manufacturing with an experience of 12 years on the task.

This allows me to create aesthetically pleasing and functional prototypes using a wide range of materials.

These prototypes are crucial in the product development process as they enable me to test and refine the design, ensuring its viability and performance.

By leveraging my expertise in 3D modeling and additive manufacturing, I can bring innovative ideas to life and facilitate the successful development of physical products.

Final product

Industrial & Computational Designer

Ergonomic Office chair

"As Part of a Alpha, Beta test for a new software generating minimum surfaces, the chair is design for confort and adjustability in mind. CMF are selected to give a sense of energy, charge on the office Space"

Concept designer & 3D modeler

Sorrento Hypercar

"The Sorrento Hypercar was created to push surface modeling to the limits. Designed with a mix of Sub-D and Nurbs is inspired by 6 generation Fighter Jets."

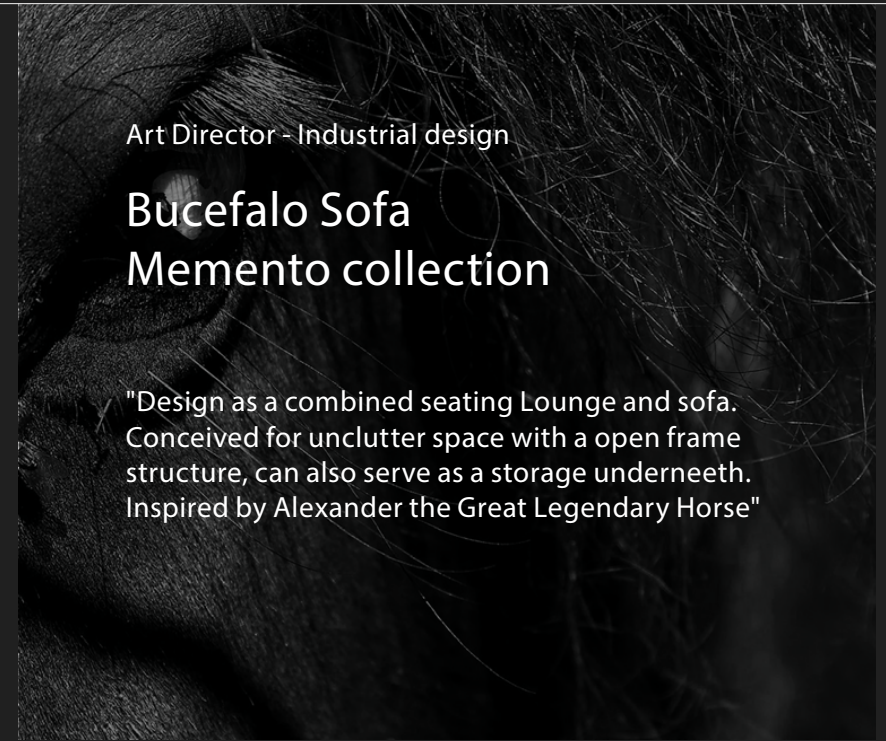

Art Director - Industrial design

Bucefalo Sofa Memento collection

"Design as a combined seating Lounge and sofa.
Conceived for unclutter space with a open frame
structure, can also serve as a storage underneath.
Inspired by Alexander the Great Legendary Horse"

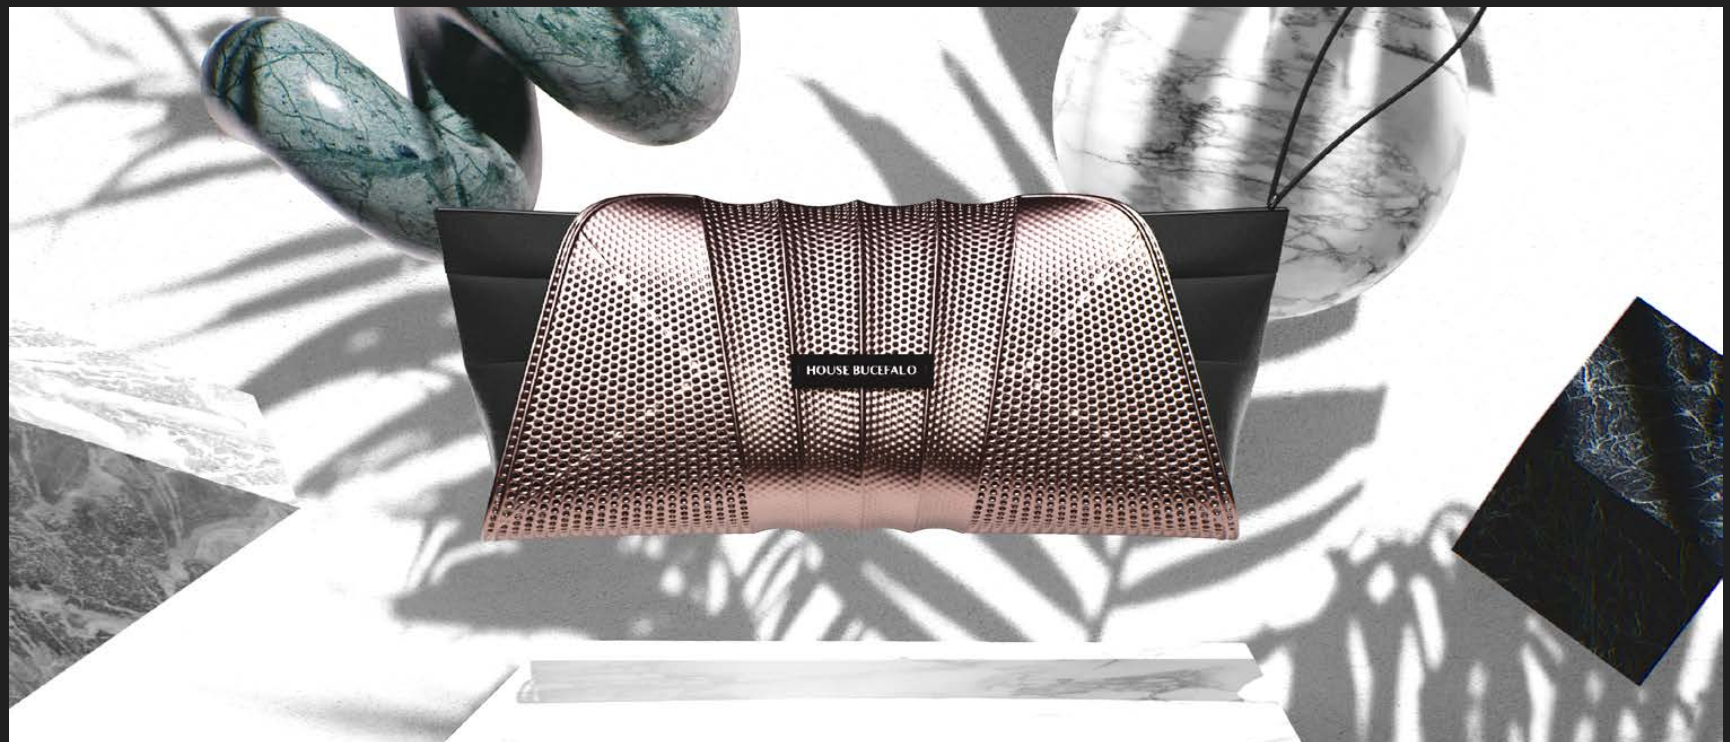

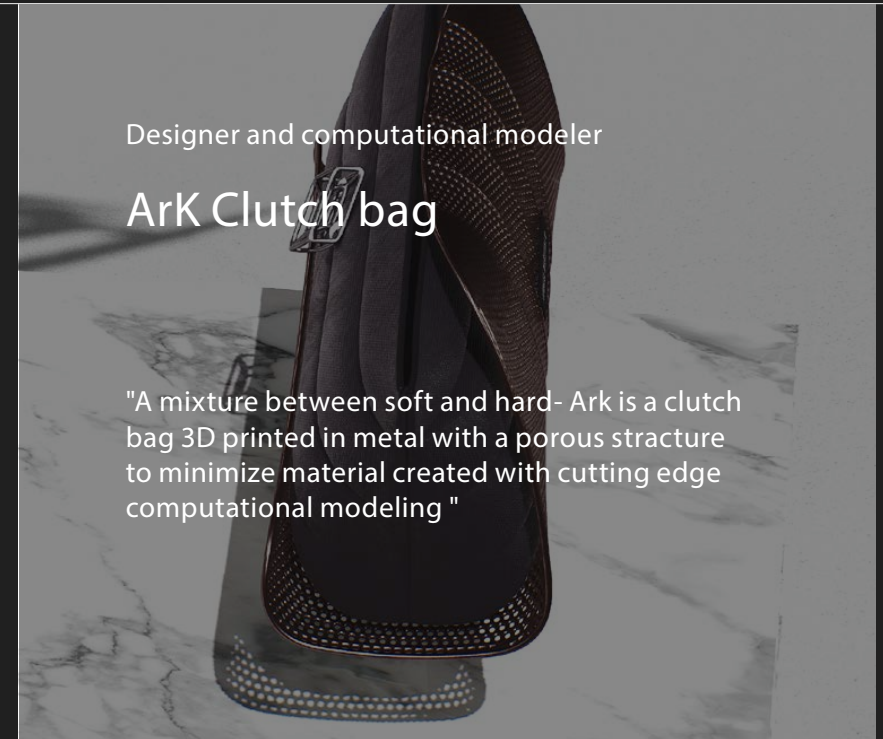

Designer and computational modeler

ArK Clutch bag

"A mixture between soft and hard- Ark is a clutch bag 3D printed in metal with a porous structure to minimize material created with cutting edge computational modeling "

Industrial Design & Engineering

EV CHARGER

"Dual AC charger for Semi public spaces, designed with a futuristic and Retro Arcade Style Vibe. Made in polymers and metal for protection to vandalism and exterior stress. Here the first Prototype of the newly design charger"
